

# KIEWIT'S COMMITMENT TO BUILDING PROJECTS THAT MATTER

Across the U.S., Canada and Mexico, we partner with public and private clients to complete projects that are critical our communities.

From the roads and bridges that get us safely from one place to another, to industrial plants that manufacture the food, medicine and materials we depend on, Kiewit people spend each day designing, building and supporting projects that matter.

## OUR EFFORTS

Our commitment to deliver projects that improve lives across North America and the world, includes work in these major markets:

- *Building*

Our resume in building includes hospitals, schools, corporate headquarters, arenas and more. We build facilities that allow our communities to remain healthy, educated, employed and entertained. From small-scale renovations, to multi-million-dollar new builds, our building professionals continue to do important work in the market that got us our start back in 1884.

- *Industrial*

At Kiewit, industrial is a broad term which covers all of the projects that produce consumer goods once they're complete. Food for pets, medicine for families, and aluminum for cars are some of the products made in the industrial facilities we design and construct.

- *Mining*

Our mining operations provide access to raw materials that are used as an energy source, fertilizer to grow the food we eat, and other products we rely on everyday. In some communities, our mining operations are an important economic driver that provides local employment and related business opportunity.

# KIEWIT'S COMMITMENT TO BUILDING PROJECTS THAT MATTER

- *Oil, gas & chemical*

We partner with domestic and international oil and gas firms to develop the energy sources our world is dependent on. From the oil and gas that powers our transportation and household appliances, to the petrochemical byproducts used in everyday materials, our work in the oil, gas and chemical market is expansive.

- *Power*

We're proud to power the world around us. Kiewit engineers and construction professionals tackle natural-gas, renewable, hydroelectric and nuclear projects from coast to coast. As a leader in the power generation market, we're constantly adding more capacity to the energy grid, and providing safer, cleaner and more reliable power solutions.

- *Transportation*

Roads, bridges, rails, airports and marine ports are all critical in getting people and resources from one place to another. Across the U.S. and Canada, our employees are designing and building the transportation infrastructure that communities need to more safely, efficiently and dependably connect them to the world.

- *Water and wastewater*

Kiewit employees have the experience and expertise to build water and wastewater infrastructure, taking water from source to tap, and returning it safely to the water ecosystem. Dams, reservoirs, desalination plants, supply pipes, and water treatment plants are critical to safely supplying clean water to communities. Kiewit crews are building it all.
